

Georgie Pizimolas

Georgie Pizimolas is a Senior Physiotherapist in the Critical Care team at the Queensland Children's Hospital with over 18 years experience, working in both adult and paediatric intensive care.

Georgie is part of the PICU Allied Health Leadership Team and chairs the Australian Physiotherapy PICU Network. She delivers simulated learning to Australian universities as well as workforce training around the state of Queensland.

Georgie developed the protocol for the use of Ventilator Hyperinflation in paediatrics at QCH and is leading the clinical use of Lung Ultrasound for physiotherapy in PICU in Australia, including a research project investigating the use of ultrasound of the diaphragm in children.

Cameron Greenland

Cameron Greenland is a Senior Physiotherapist at the Queensland Children's Hospital with a special interest in the use of lung ultrasound for paediatric patients.

He graduated from the University of Queensland in 2012 and has since worked at the Mater Hospital and Queensland Children's Hospital in cardiorespiratory and critical care units.

He has also been involved in simulation and clinical education, as well as paediatric research projects using lung ultrasound. He is passionate about advancing the role of physiotherapists in lung ultrasound and sharing knowledge and experience with other clinicians. He will be presenting on the applications and benefits of lung ultrasound for physiotherapists in paediatrics.
