

Dr. Andreas Schibler MBBS

Dr Andreas Schibler is recognised as a world leader in paediatric acute respiratory medicine and children's intensive care with over 30 years of academic work improving respiratory support methods for children.

Dr Schibler's research includes a number of the largest ever performed clinical trials in children globally which have been published in the highest ranked medical journals. The outcomes to these significant studies have transformed best medical practice in the care and management of children with a respiratory disease. He has published over 180 papers and contributed to more than 5 medical books. Dr Schibler has received over AU\$25 M in research funding during his career and is a regular NHMRC and MRFF review panel member and is regularly invited to lecture at international conferences and specifically as the key note speaker. Research highlights include the series of research studies known as the PARIS studies, investigating improved respiratory support for children who require oxygen therapy. As the lead researcher in these projects, Dr Schibler's work has changed practice worldwide.
